DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore; the first transistor having a channel coupled between the logic transistor and a low voltage source, and a gate coupled with a comparator; and the second transistor having a channel coupled between the output and a low voltage source and a gate coupled with a comparator, in claims 15 and 16 respectively, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 2819

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Naffziger (U. S. PAT. 6,075,386).

In claim 13, Naffziger teaches all claimed features in Fig. 4, a normal input gate for gating a data signal (input to logic 108, see Fig. 1) to a latch of the scanable latch circuit, the normal input gate comprising: a pre-charge circuit (402) to pre-charge a dynamic node (410) before the data signal is evaluated; a logic transistor (inherent, a logic gate inside 108 not shown) having a gate coupled with the data signal (input to 108) to discharge the dynamic node when the normal input gate is activated (input mode); and an output (OH) to couple a voltage source (V_{DD}) to the latch based upon a charge on the dynamic node (when 402 is closed or conducting).

In claim 14, Naffziger further teaches the normal input gate of claim 13, wherein the data signal (input to 108) and a normal input path (OH), evaluation clock (100) are gated directly to the normal input gate (Fig. 4) to evaluate the data signal.

4. Claims 15-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 1-12 and 18-28 appear to comprise allowable subject matters.
